New Boiler Installation

Are you looking for a boiler installation from an affordable, local team of engineers? Fitting a new boiler isn't something you'll expect to do very often, but when your existing system does give up the ghost, you're going to need a reliable fix, and sharpish.

Looking for a new boiler installation in your local area doesn't have to be difficult. Not only that, but you shouldn't have to pay through the nose, either. That's why we're making it easy for everyday people to find great quotes for new boilers no matter their needs.

Whether you're looking for a boiler replacement after your old one's blown, or if you simply want to upgrade your existing heating system, allow us to find you reliable experts in your area. Why go with the first offer you come across?

Don't forget that you might even be able to take advantage of boiler grants, too! Check out our full guide [here](#).

Why Get Three Quotes for a New Boiler?

When you're in desperate need of a brand new boiler, it's probably tempting to go with the lowest bidder or the nearest expert first. However, more often than not, you're going to be doing yourself and your household budget a disservice.

We offer a three-quote system as this will give you insight into the different services in your area. All you need to do is offer us a handful of information, and we'll deliver three custom quotes for a new boiler installation right to your inbox. It's as simple as that.

There's no obligation to take any of the quotes – you might just be on a fact finding mission, and we perfectly respect that! We seriously suggest you set up free visits from the servicepeople we find for you – as this, at least, will mean you get a good scope of what to expect.

If it's costs you're worrying about, take a look at our guide to home energy saving tips. You'll definitely want to put these into effect after your new boiler installation!

Why Might I Need a New Boiler Installation?

First of all, your old boiler might have finally sparked up its last flame. It's sad, but after a while, even the best boilers start to wind down. If this happens, you're naturally going to need to look for a leading quote. If boiler servicing won't do the trick, then a complete refit certainly will.

You might, on the other hand, find that you're spending well over the odds on energy bills. If you're running an older boiler and you find that your rates are skyrocketing every quarter, maybe it's time for an upgrade. There's no need to worry about new boiler cost, either – as some of the best combi boiler systems on the market are amazingly affordable both up front and in the long run.

You won't have to refit or upgrade your boiler every year (or even every two or three), but when the time comes, you're going to need an expert. If you're unsure whether or not you need to get shut of your current heating system, take a look at our guide to boiler types explained.

Why Use Our Boiler Quotes Service?

We only work with the best boiler servicing, sales and repair people around. We carefully vet all of the local heating engineers and services we deliver quotes from so that you can only ever expect legitimate prices for reliable services. If a heating or boiler team doesn't pass our tests, we don't pass their details on. It's as simple as that.

Here's how it all works.

- Simply fill out our web form with your details. Let us know what you are looking for from a new boiler, where you live, and your contact information.
- We'll contact you directly to confirm how you'd like to move ahead. This allows us to check your details and to ensure we're all on the same page!
- Then, we will consult our database of trusted boiler installers and will reach out to three suitable companies on your behalf.
- These companies will then reach out to you and arrange a free visit. This is crucial to get a reliable quote!
- Then it's down to you – you choose the quote and service that fits you best and appeals to your needs the most!

If you need a new boiler installation and don't want to have to pay over the odds (who does?) – then start comparing for free quotes, right here, right now. Got 5 to 10 minutes to spare? Let's help you get that new boiler up and running without bending your bank balance.

MAKE THE RIGHT CHOICE

Boiler Replacement

Millions of us depend on central heating. We're very fortunate in many ways! However, over years and years of use, there may come a time when a boiler replacement is necessary.

It's bad enough when boiler breakdowns happen in the winter, but we need hot water in the warmer months, too! If your boiler is showing signs of slowing down, or if it's just not heating up water as reliably as it should, it's likely time to look for a gas boiler replacement.

But – won't that cost a lot of money? It can do – but not if you shop with the best suppliers. What's more, the type of boiler you use can impact on the price you pay. Why not take a look at our guide to boiler types explained to learn more?

In the meantime, keep reading to find out how you can grab great rates for a new boiler replacement.

How to Cut the Cost of Boiler Replacement

Replacing a boiler is likely to be the last thing you want to do when you're already feeling pretty chilly. What's more, it can get pretty tricky to find a reputable boiler engineer in your area for low prices. Where on earth do you start when you need a new boiler sooner rather than later?

That's where we can help. We understand that getting a boiler replaced is often an emergency situation. If you're on a tight budget or really want to get the best value from local suppliers, it makes sense to get out there and compare.

Simply fill out our quick form with as much information as you can on your boiler needs. We'll then get back in touch with you to discuss what you're looking for and will line up three reliable boiler engineers you can trust.

Nice and easy – and as we work on your behalf to find top boiler services in your area, you won't have to do any of the nitty gritty. Just sit back and wait for our call! The engineers we choose for you will then set up no-obligation quotes on replacing your boiler.

In the meantime, if you're wondering what to expect from combi boilers or LPG boilers, why not read up on our expert guides?

You should also take a look at our guide to boiler grants, too – you might qualify for money towards a new heating system.

Grab Boiler Replacement Quotes Today!

If your boiler is breaking down and you need a new system ASAP, there is definitely the magic number when it comes to quotes. Use our expertise and connections to find reliable, knowledgeable experts, and compare their rates. Remember, there's never any obligation for you to proceed.

Be sure to fill out our free form now for more details. Don't forget to check out our guide to boiler servicing, too, if you feel your heating system just needs a bit of a tweak!

Why Trust Our Service?

We're pleased to say that we've built up a fantastic array of contacts in heat engineering over the years. We have close relationships with boiler experts who are in a prime position to offer you a low cost boiler replacement at short notice.

As we have such fantastic relationships with engineers, we'll pass unbeatable savings onto you. We'll line up three engineers we feel to be the best fit for your new boiler needs, who will contact you to arrange free consultations.

Once they take a look at your setup and decide what you need from a gas boiler replacement or otherwise, they will offer you a quote. That means you never have to agree to prices – simply take a look at what you have on offer and make a decision.

MAKE THE RIGHT CHOICE

New Boiler Cost

So – the time’s come to replace your boiler. But how much does a new boiler cost these days? Will you have to factor in parts, labour, time – or anything else on top?

When it comes to replacing a boiler, or fitting a new model for any other reason, it makes sense that you’ll be looking into boiler prices. Unfortunately, depending on the type of boiler you buy and the supplier you work with, you might be looking at a big bill.

That, luckily, is where we can help! We’re pleased to be able to find reliable suppliers who can deliver honest quotes for all new boiler fittings.

In the meantime, if heating costs are really winding you up, why not take a look at our guide to home energy saving tips?

Remember, there’s never any need for you to accept a quote or to move any further unless you absolutely want to. Don’t ever feel pressured into a deal unless you know it’s one you can afford.

Do also take the time to read our guide to boiler grants, too – you might be able to cut down the cost of heating replacement.

How Much Does a New Boiler Cost?

The cost of a new boiler is, naturally, going to vary from type to type, make to make, and installer to installer. For example, when looking at combis, you might pay as little as £1,600 for a budget boiler, or upwards of £2,500 for something top of the range.

Even when you veer towards the budget end of boiler installations, you are still looking at parting with significant money. That’s why it is really important to make sure you set up a boiler with a reputable company.

Good combi boilers should, on average, last you up to 15 years. This may vary with regard to other types of boiler, however, so do make sure – again – to shop around.

If you’re worrying about the difference between types of boiler, or what a new boiler installation is going to entail, make sure to take a closer look at our expert guides!

How Many Quotes Do I Need for a New Boiler?

As new boiler prices are always likely to vary depending on what you need, when, and where from, it makes sense to reach out for quotes. In our experience, three is a nice figure to aim for. That’s because you should expect a general cross-section of what to pay for from different firms.

We work with leading engineers in the heating trade and have built up fantastic working relationships. That means we’re in a great position to offer you some of the best deals on leading boiler brands, installations and more.

When it comes to getting a quote, we will first discuss your needs before approaching suitable suppliers near you. The engineers we choose will then arrange to visit you for free. On the back of these visits, they will offer you a snapshot of the new boiler cost you can expect.

You’ll likely get a choice of boiler types and makes. Make sure to ask any burning questions you have, too – as this will make sure engineers match the most suitable systems for you.

Reach Out for Local Boiler Support

Getting a new boiler set up doesn’t have to be a hassle. If you’re worrying about new boiler prices and that you don’t have the budget to fit your needs right now, make sure to fill out our online form and we will work to find you reliable, affordable engineering services near you.

Don’t spend more time than you have to in hunting down a great quality boiler for a price you can afford. Why not check out our guides on electric boilers and condensing boilers for more details on what’s available to you?

MAKE THE RIGHT CHOICE

Boiler Types Explained

Are you in the market for a new boiler? Maybe you have a gas boiler or a combi boiler – and are unsure what the different types of heating do, or how they are likely to benefit you in the long run. Before you go ahead and pay for any heating engineering, it's a good idea to learn a bit more about different boiler types, and how each might benefit you.

Need a boiler replacement from an engineer near you? Take a look at our guide on what to expect, and how our quote gathering service could support you. In the meantime, let's briefly run down the different types of boilers your home could benefit from for years to come.

Combi Boilers

Combi boilers tend to be the most common choices for homes in the UK. They are efficient, affordable, and compact. What's more, it's unlikely you will need much pipework at all with a combi.

Combi boilers are fairly uncomplicated on the whole and offer hot water directly to your taps. They don't use water tanks, which means they are perfect if you don't have any kind of attic space. Take a look at our full guide to combi boilers for more details.

Gas Boilers

Gas boilers are also fairly common across the UK. As you can imagine, you'll need an existing gas connection to run this type of system. Despite not being the most energy-efficient of systems, they offer a lot of value for money!

You should also keep in mind that the gas used in these boiler systems is the cleanest you'll find. That means if you are looking for a clean burn at a fraction of cost, gas could be just the ticket. Read more in our guide.

System Boilers

System boilers are very compact and reliable and are one of the most appealing of all the different types of boilers out there. That's because much of what you need is built into the boiler itself. There's no need for any kind of water feed or attic space.

This type of boiler is also extremely flexible and scalable. That means if you want to connect it with something as modern and forward-thinking as solar PV, you can! Combis tend to be more compact, however – read more in our system boilers guide.

Condensing Boilers

When looking at boiler types for your home, you'll likely find that most are condensing boilers by design. That's because a condensing system is more energy-efficient. They work harder to drive energy from heat, and therefore waste less.

This, of course, means that you can also expect to pay less on heating and fuel in the long run! You'll only really have a non-condensing boiler if you have an older model. However, read our guide to condensing boilers for the full lowdown.

Finding a New Boiler

There's no need to worry if the boiler types here have you baffled! Simply fill out our quick form and we'll put you in touch with a reliable team who can set you up with affordable, flexible heating that suits you and your family's needs.

Heat-Only Boilers

Heat-only boilers tend to be some of the most basic of all heating systems, largely existing purely to fuel radiators. However, they can often be very flexible, in that they can operate on open and closed bases. You may need a water tank in the attic to operate these boilers. They are often called 'conventional' boilers, and you can learn more about them in our guide.

Back Boilers

Electric boilers, as you'd expect, run off the mains, and of the different types of boilers available, they are perhaps the cheapest to install, with the least amount of fuss at setup. They are also very speedy and remarkably efficient.

You may actually save more money by running on a gas boiler than on electric, however – why not check out our guide to new boiler installations, or our electric boilers guide, to learn more?

Electric Boilers

Electric boilers, as you'd expect, run off the mains, and of the different types of boilers available, they are perhaps the cheapest to install, with the least amount of fuss at setup. They are also very speedy and remarkably efficient.

You may actually save more money by running on a gas boiler than on electric, however – why not check out our guide to new boiler installations, or our electric boilers guide, to learn more?

LPG Boilers

Finally, you're likely to come across LPG boilers as a modern alternative to old-style oil boilers. LPG is fuel that's more efficient and their boilers tend to offer more flexibility. They are remarkably compact for oil systems, too!

Again, we have a full write-up on LPG boilers for you to check out, too.

MAKE THE RIGHT CHOICE

Boiler Grants

Are you struggling to pay for your home heating? Maybe your current boiler isn't working as efficiently as it should, and you're worried about being able to afford a replacement. The good news is, there are boiler grants available to UK homeowners and landlords that might just cut the cost of heating up your property.

The government has brought in a number of measures to not only help combat fuel poverty across the UK, but also to help make homes more energy efficient. If you could benefit from a condensing boiler, and qualify for assistance from the government, you should certainly think about reaching out for boiler grants.

Here's a quick guide on what to expect from grants – why not check out our rundown on different types of boilers explained, too, if you're not sure on what to anticipate?

Applying for Boiler Grants

It's generally very easy to apply for boiler grants. Under the ECO scheme supported by the government, you can apply for financial assistance for a new boiler through your energy supplier. Be sure to speak to your specific supplier for advice on what to expect.

What you can expect on the back of a boiler grant application is to arrange a free consultation from a home energy assessor. They will take a look at how your home is set up for heating and will ensure that you fit the criteria laid out by the ECO scheme.

Providing you fit eligibility for a boiler grant, there are no reasons why you won't be able to save cash on setting up a new system through ECO.

Why not check out our guide to home energy saving tips if you want to cut down costs elsewhere in your property, too?

Eligibility for Boiler Grants

Boiler grants from the government and from qualifying suppliers will, of course, expect you to fit certain criteria. Generally, if you claim any of the following benefits from the government, you may benefit from a boiler subsidy:

- Income related or job seeker's allowance
- Working tax credits (restrictions may vary)
- Child responsibility (restrictions may vary)
- Child tax credit (restrictions may vary)
- State pension credits

Of course, if you are concerned regarding what you can and can't apply for, it is worth approaching government services directly. Do also keep in mind that you may need at least one of the following, too, when applying for any kind of boiler grant:

- Disabled child tax credits
- Disability or enhanced premiums
- Enhanced pension premiums
- Parents of children in full time education

What Could I Get from a Boiler Grant?

If you qualify for a boiler grant, apply, and are successful, you may find that you receive an energy efficient new boiler without any extra costs or fees. This could, effectively, save you more than £300 per year in energy costs.

Therefore, if you are finding your energy bills skyrocketing, but you're worried about the cost of paying out for a replacement system, then make sure to file a grant application.

Make sure to take a look at our guide to condenser boilers and combi boilers, too, as it is these systems that you are most likely to receive through a grant package.

Replace Your Boiler Today!

With boiler grants being more widely available now than ever before, it really does make sense to take full advantage.

Why not reach out to local heating engineers for leading quotes on new boiler installations? Simply fill in our quick form and we'll get you set up ASAP. New boilers don't have to be difficult to arrange!
